

Intellijoint Surgical and Corin Group enter strategic partnership for intellijoint HIP

16 March 2016

Intellijoint Surgical Inc., a privately held Canadian medical technology company committed to developing and commercialising miniaturised surgical smart tools announced today the signing of a distribution agreement with Corin Group. The deal gives Corin distribution rights for Intellijoint's flagship product, [intellijoint HIP™](#), in Australia and paves the way for broader distribution and co-development between the two companies.

intellijoint HIP™ provides orthopaedic surgeons with vital intraoperative measurements in real time, enabling accurate delivery of the target cup orientation, equalisation of leg length and restoration of hip offset. These critical measurements enable surgeons and hospitals to improve surgical outcomes by reducing uncertainty and risk, while improving patient outcomes and economics. Russ Mably Corin's Chief Operating Officer commented, "We are delighted to partner with such a progressive company as Intellijoint Surgical, and are excited about our future collaboration. This partnership will further strengthen our market leading position in functional implant positioning with our existing OPS™ technology (Optimized Positioning System), and underlines our commitment to continue to invest in Personalised Procedural Innovation".

Armen Bakirtzian, Chief Executive Officer and Co-founder of Intellijoint Surgical further commented "We are pleased to partner with Corin to offer **intellijoint HIP™** to surgeons in Australia. The broader capability of Corin's organisation and their commitment to innovation will expand access to the latest technology available for 3D surgical measurement to the growing Australian hip replacement market where surgeons currently perform about 45,000 procedures annually. We look forward to the beginning of a meaningful relationship between our two companies and are excited about future opportunities".
