

Revival™ Modular Revision Stem gains 510(k) clearance

3 May 2016

Corin is pleased to announce 510(k) clearance in the US for a range of modular titanium revision stems. The innovative [Revival™](#) Modular Revision Stem is based on a long-term proven design philosophy, which has been successfully implanted in markets outside the US.

The newly approved [Revival™](#) Modular Revision Stem system offers significant benefits over its major competitors in particular with shorter distal options and simpler instrumentation. “The addition of [Revival™](#) to Corin’s hip and knee portfolio will further accelerate growth in the US market and more importantly provide surgeons with greater options for patients requiring hip revision surgery.” said Paul Berman, President Corin USA.
